29011 6" diameter, 1/4" deep, 2" aperture

Color: (WH) White

CLOSE UP COVER PLATE COVERS THE OPENING OF A RECESSED FIXTURE

To cover the opening of a recessed fixture and create a finished look to the ceiling lighting, use an accessory Close-Up Cover Plate.

A Close-Up Cover Plate can be used with all Swivelier Screw-In Extenders that have 5", 8", or 11" stems, or with custom length extenders where lamp is below ceiling line.

Swivelier Screw-In Extenders screw into a medium base socket. They are available in single and double light models to accommodate medium base and GU-10 base line voltage halogen lamps. Line voltage medium base models can also be used with compact fluorescent self ballasted lamps. Other models are available that convert 120 volt to 12 volt for use with AR-111, PAR-36 and MR-16 12 volt halogen lamps.

Two attachment springs hook between cover plate and holes or slots in recessed housing to secure the cover plate to recessed fixture.

The Swivelier Extender then passes through a two inch opening where it is easily screwed into the light socket.

Available in 6" & 8" diameters the cover plate is 1/4" deep and provides a finished look to the ceiling lighting.

The cover plate is not intended to be used with a lamp that is positioned inside a recessed fixture, above the cover plate.
